Profile

Mechanical engineer and full-stack software engineer with hands-on experience in chemical processes, oil production, field engineering and production web platforms. Currently CTO & Head of Technology at Reallow, leading the engineering of a real estate platform built with Next.js, TypeScript and MongoDB, while continuing as field engineer and laboratory technician at LATEQ Chemical Industries. Skilled in the formulation of oil separation chemicals, mechanical system diagnostics and process optimization, and in building secure, scalable web applications. Seeking to contribute technical leadership, process optimization and field-ready engineering expertise to a forward-thinking technology or energy company.

Education

Afe Babalola University, Ado-Ekiti, Ekiti State: B.Eng. (Mechanical Engineering)

- Grade: Second Class Upper Division

Experience

CTO & Head of Technology, Reallow — Sep 2026 – Present

- Lead technology for Reallow (reallow.co), a direct landlord-to-tenant real estate platform live in Abuja, Port Harcourt and Warri.
- Own the platform architecture and engineering: Next.js, React, TypeScript, MongoDB and Auth.js, with role-based dashboards for tenants, landlords, admins and support staff.
- Built Paystack payment flows for listing verification, rent and deposits, with idempotent webhook handling and an atomic wallet ledger.
- Implemented NIN identity verification, tenancy agreement e-signatures with SHA-256 audit trails, and geofenced field-inspection check-ins.
- Delivered map-based property search with geocoding, saved-search alerts, and localisation in six languages (English, Hausa, Igbo, Yoruba, Pidgin, Urhobo).

Field Engineer / Laboratory Technician, LATEQ Chemical Industries Ltd — 2018 – 2023; 2024 – Present

- Led on-site formulation and blending of demulsifiers and other oilfield production chemicals.
- Conducted field-based testing to evaluate chemical performance during oil-water separation processes.
- Maintained chemical blending equipment and supervised minor mechanical repairs on pumps and mixing systems.
- Carried out QA/QC procedures in laboratory settings to verify formulation accuracy and regulatory compliance.
- Worked with plant engineers to optimize dosing rates and blending workflows, enhancing production efficiency.
- Documented formulation procedures and field performance reports; supported production scaling.
- Occasionally automated lab result documentation using lightweight internal tools (Java-based).

Software Developer, Solutions Architect, Huawei Technologies Ltd — 2024

- Developed and maintained responsive web applications using Next.js, React, Redux, Node.js and MongoDB.
- Designed and implemented RESTful APIs using Node.js, Express.js and MongoDB.
- Wrote optimized SQL queries for efficient database operations using PostgreSQL and other relational databases.
- Utilized Huawei SaaS to manage alarms on sites in the telecommunication sector and implemented automation processes using JavaScript.
- Managed databases effectively using MongoDB and PostgreSQL.
- Built microservices with Spring Boot and Java for scalable and efficient backend systems.

Mechanical and Automotive Specialist Intern, Gladtrico International 2023

- Participated in troubleshooting engine, brake and suspension systems.
- Conducted inspections in line with national standards for mechanical performance.
- Worked alongside senior engineers to maintain optimal vehicle performance through repairs and calibrations.
- Assisted in diagnosing and repairing mechanical issues in automobiles.
- Conducted technical inspections to ensure compliance with automotive industry standards.

Mechanical Engineer and Automobile Specialist Intern, RT Briscoe 2021

- Diagnosed and repaired mechanical faults in automobiles.
- Conducted preventive maintenance and inspections to improve machine performance.
- Collaborated with the team to implement solutions for optimizing automotive systems.
- Performed engine overhauls, AC system maintenance and preventive maintenance.
- Supported component testing and technical assessments using industry-standard diagnostic tools.

Key Projects

LATEQ Chemical Industries Ltd

- Redesigned the demulsifier batching process, reducing blending cycle time by 30% and increasing plant throughput.
- Coordinated QA testing and documentation across three client sites, cutting chemical rejection incidents by 40%.
- Upgraded dosing systems to reduce overconsumption, resulting in a 12% drop in chemical waste per barrel treated.

Software (case studies at jrhunor.com)

- **Primetrex Affiliate System**: affiliate platform for a copy trading service, with Telegram bot integration, referral tracking and payment processing.
- **Averis Academy Platform**: affiliate and learning management platform (Next.js, TypeScript, MongoDB, NextAuth) with real-time analytics dashboards.
- **OliveHaus Daily Manager**: real-time client project management platform with progress tracking, change requests and messaging.

Key Skills & Tools

Software Engineering

- Languages & Frameworks: TypeScript, JavaScript, Java, Next.js, React, Node.js, Express, Spring Boot, Tailwind CSS
- Data & Infrastructure: MongoDB, PostgreSQL, REST APIs, Git, Docker, Vercel, Cloudinary, Paystack

Engineering & Technical Skills

- Mechanical Systems: Diagnostics, maintenance, fault repair, system optimization
- Chemical Processes: Oil separation, demulsifier formulation, QA/QC testing
- Design & Process Tools: AutoCAD, P&ID interpretation, HAZOP fundamentals
- Simulation (Basic): MATLAB, Aspen HYSYS (introductory knowledge)

Professional Capabilities

- Technical Leadership & Platform Architecture
- Field Engineering & Supervision
- Cross-Functional Collaboration
- Technical Documentation & Reporting
